

The TRACS Web Database

EPCC Summer Scholarship

Programme 2001

Daniel Mossop

What is TRACS?

- Training and Research on Advanced Computing Systems
- EC Funded
- Hosted By EPCC
- Code Development
- Terminals distributed to host departments

What is the TRACS Web Database?

- Web interface giving access to a database
- Started by Mario, Elena and Elson
- Intended to track EPCC terminals
- Expanded to hold other TRACS information

System at the start of the SSP :

Database

- Originally designed by Elson
- Expanded by Mario and Elena
- MySQL based

System at the start of the SSP :

Scripts

- Written in perl
- Using the DBI
- Completed table routines
- Separate script for each table
- Limited update/insert routines
- Again, separate scripts
- Admin layer

Project objectives

- Generalise the database accessing routines
- Complete the current implementation
- Create different views
- Extend admin layer
- Extend the database

Overview of the current system

- General table routine
- General update/insert routine
- Different views
- Admin layer
- www.epcc.ed.ac.uk/~daniel/tracsdB/System/
- Username: view Password: viewdata

General table routine

- One script
- Replaces the initial scripts
- Handles database expansion
- Uses table definitions

Remove ordering: Default ordering:
 Remove grouping: Default grouping:

Control button functions

Use of these removes any existing order/grouping

- Order table by this column (ascending)
- Order table by this column (descending)
- Group table by this column

Table Name = research_visits

Id [new record]	Visitors	Start Date	End Date	Machines	Hosts	Contacts
2 [view/edit]	Gustavo Romero	09/01/2002	28/02/2002		Ben Paechter [view]	Mario Antonioletti [view]
7 [view/edit]	Adina Florea	19/02/2001	07/09/2001			
6 [view/edit]	Paul Cristea	19/02/2001	07/10/2001

Remove ordering: <input type="checkbox"/> Default ordering: <input checked="" type="checkbox"/> Remove grouping: <input type="checkbox"/> Default grouping: <input checked="" type="checkbox"/>						

Control button functions

Use of these removes any existing order/grouping

- [▲](#) Order table by this column (ascending)
- [▼](#) Order table by this column (descending)
- [G](#) Group table by this column

key		
Past	Current	Future

General update/insert routine

- One script
- View data
- Edit data
- Create data
- Handles expansion

View Current TRACS Visit

Visit ID 2
Visitor Gustavo Romero [\[View Details\]](#)
Start Date 09/01/2002
End Date 28/02/2002
Machine Associations 2001-01-09 [\[View\]](#)
Host Associations Ben Paechter, 2001-01-09 [\[View\]](#)
Contact Associations Mario Antonioletti, 2001-01-09 [\[View\]](#)

Edit Current TRACS Visit

Visit ID 2
Visitor Gustavo Romero [\[Edit Details\]](#)

- Gustavo Romero

Different views

- Different access permissions
- Allows individual table selection
- Administration
- All staff
- Systems

The future for the web database

- Extend the database
- RCS diary
- Application information
- Automatic data entry from application
